

ABSTRACT

A display unit has a face surface and a multi-layered antireflection antistatic film composed of three layers or more  
5 which are formed on the face surface. The multi-layered antireflection antistatic film has an absorption layer, a conductive layer, and a protect layer in the order from a face surface side. The absorption layer includes at least one kind of organic coloring matter, SiO<sub>2</sub>, and a silane coupling agent,  
10 and the silane coupling agent content thereof is seven times as high as the total weight of solid contents of SiO<sub>2</sub> and the organic coloring matter or lower.
